

There was a time

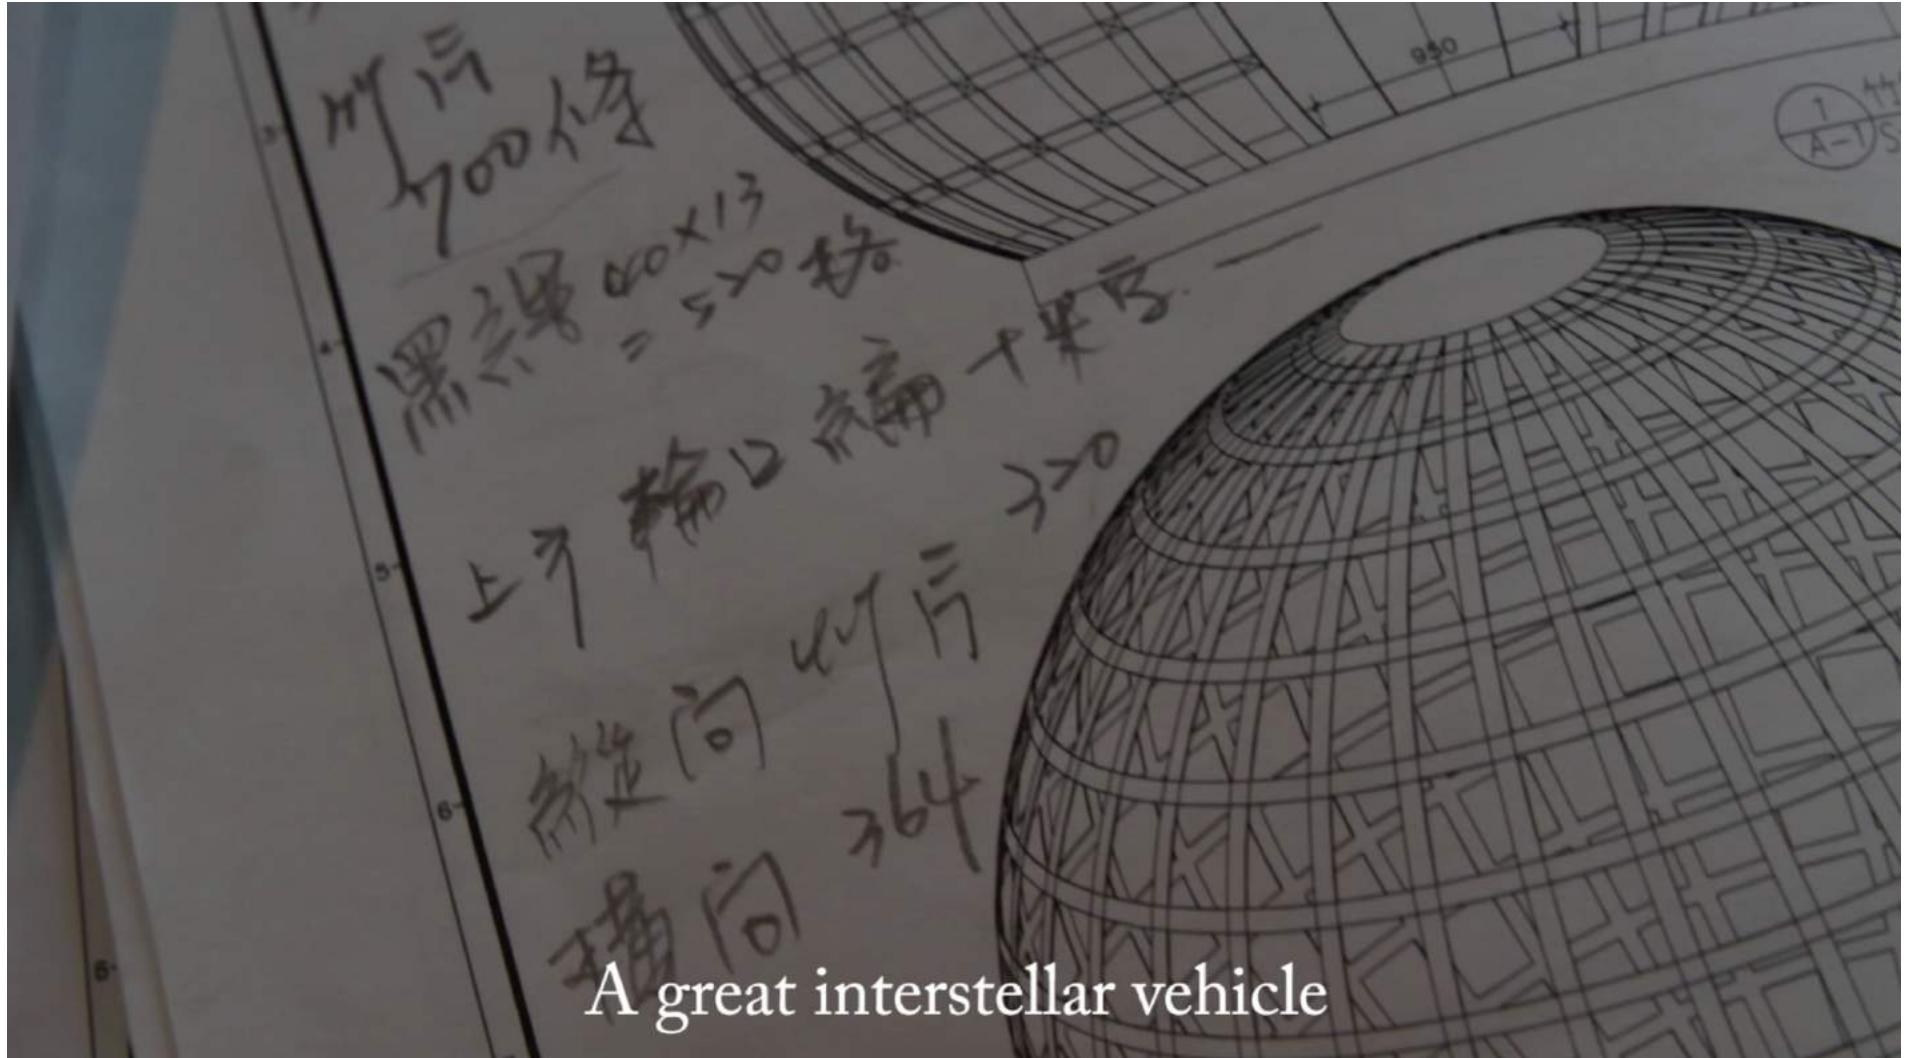

in which the craftsman

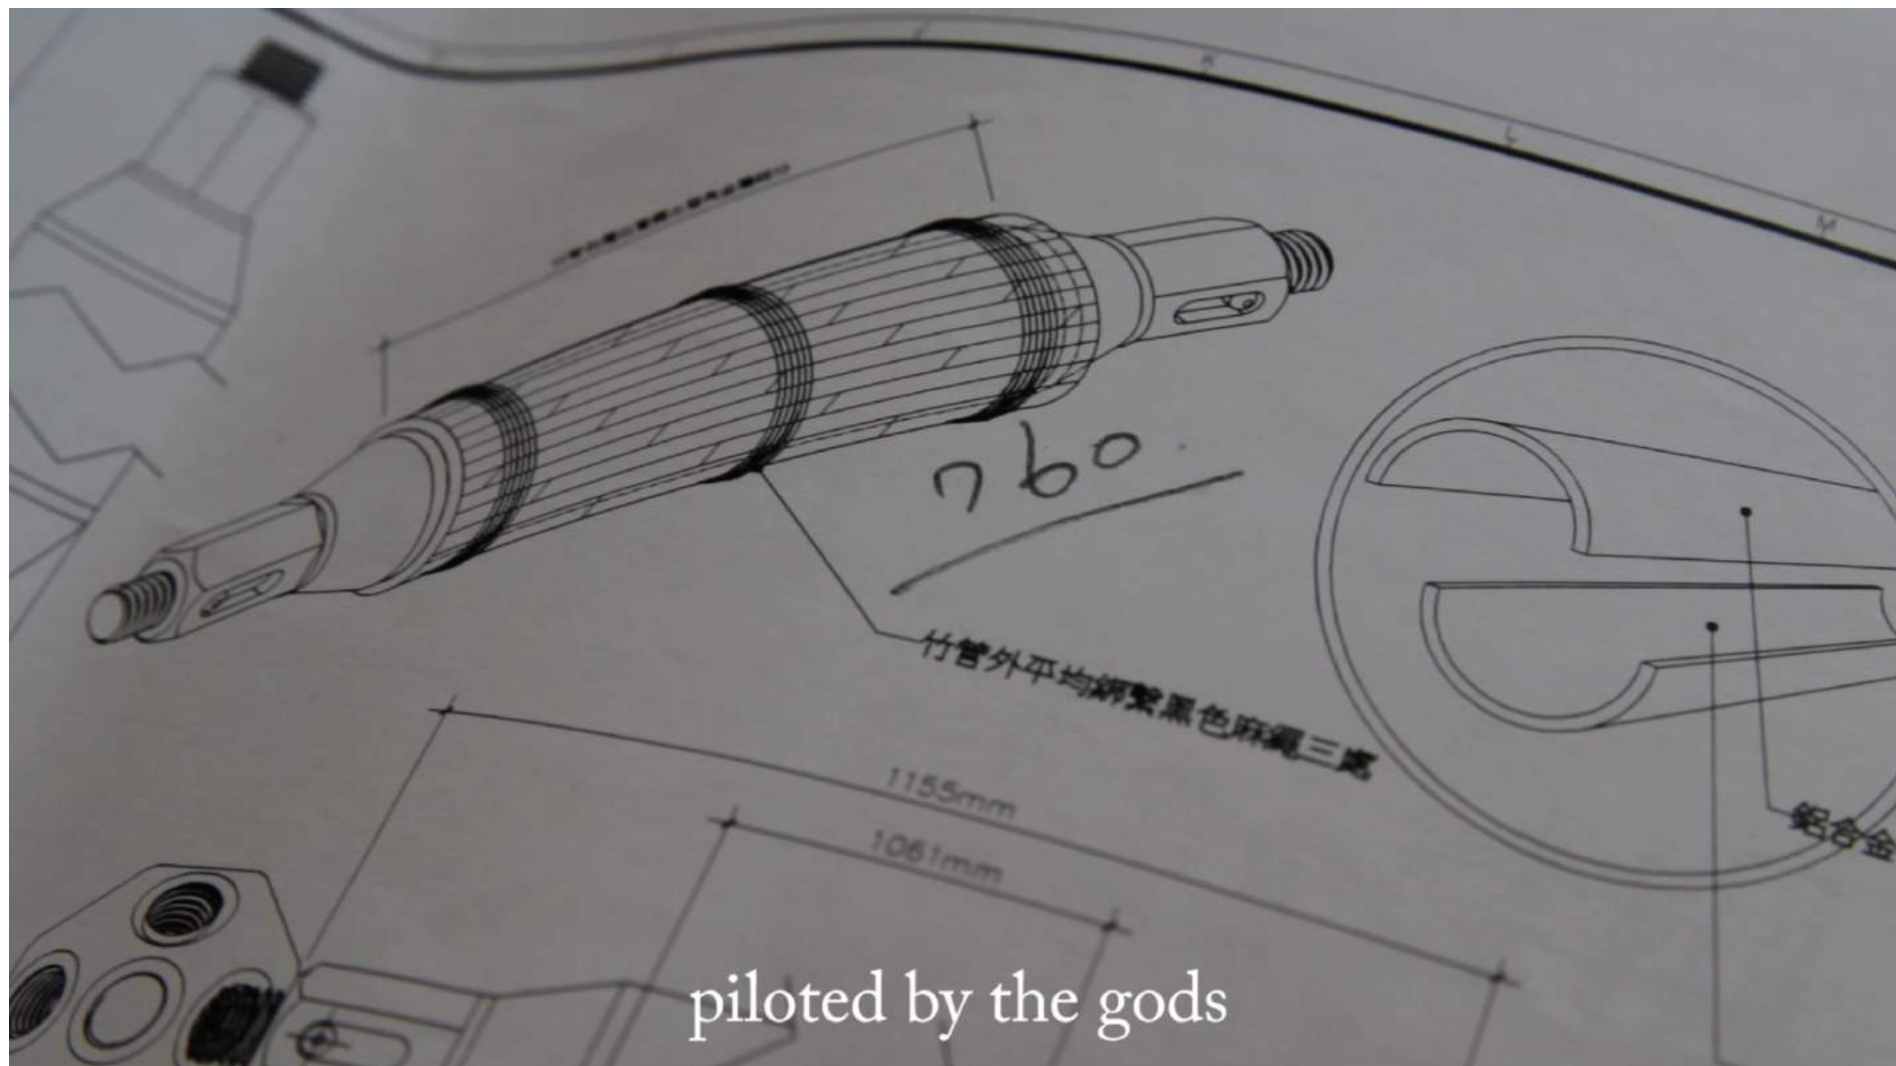

had power on the objects of the world

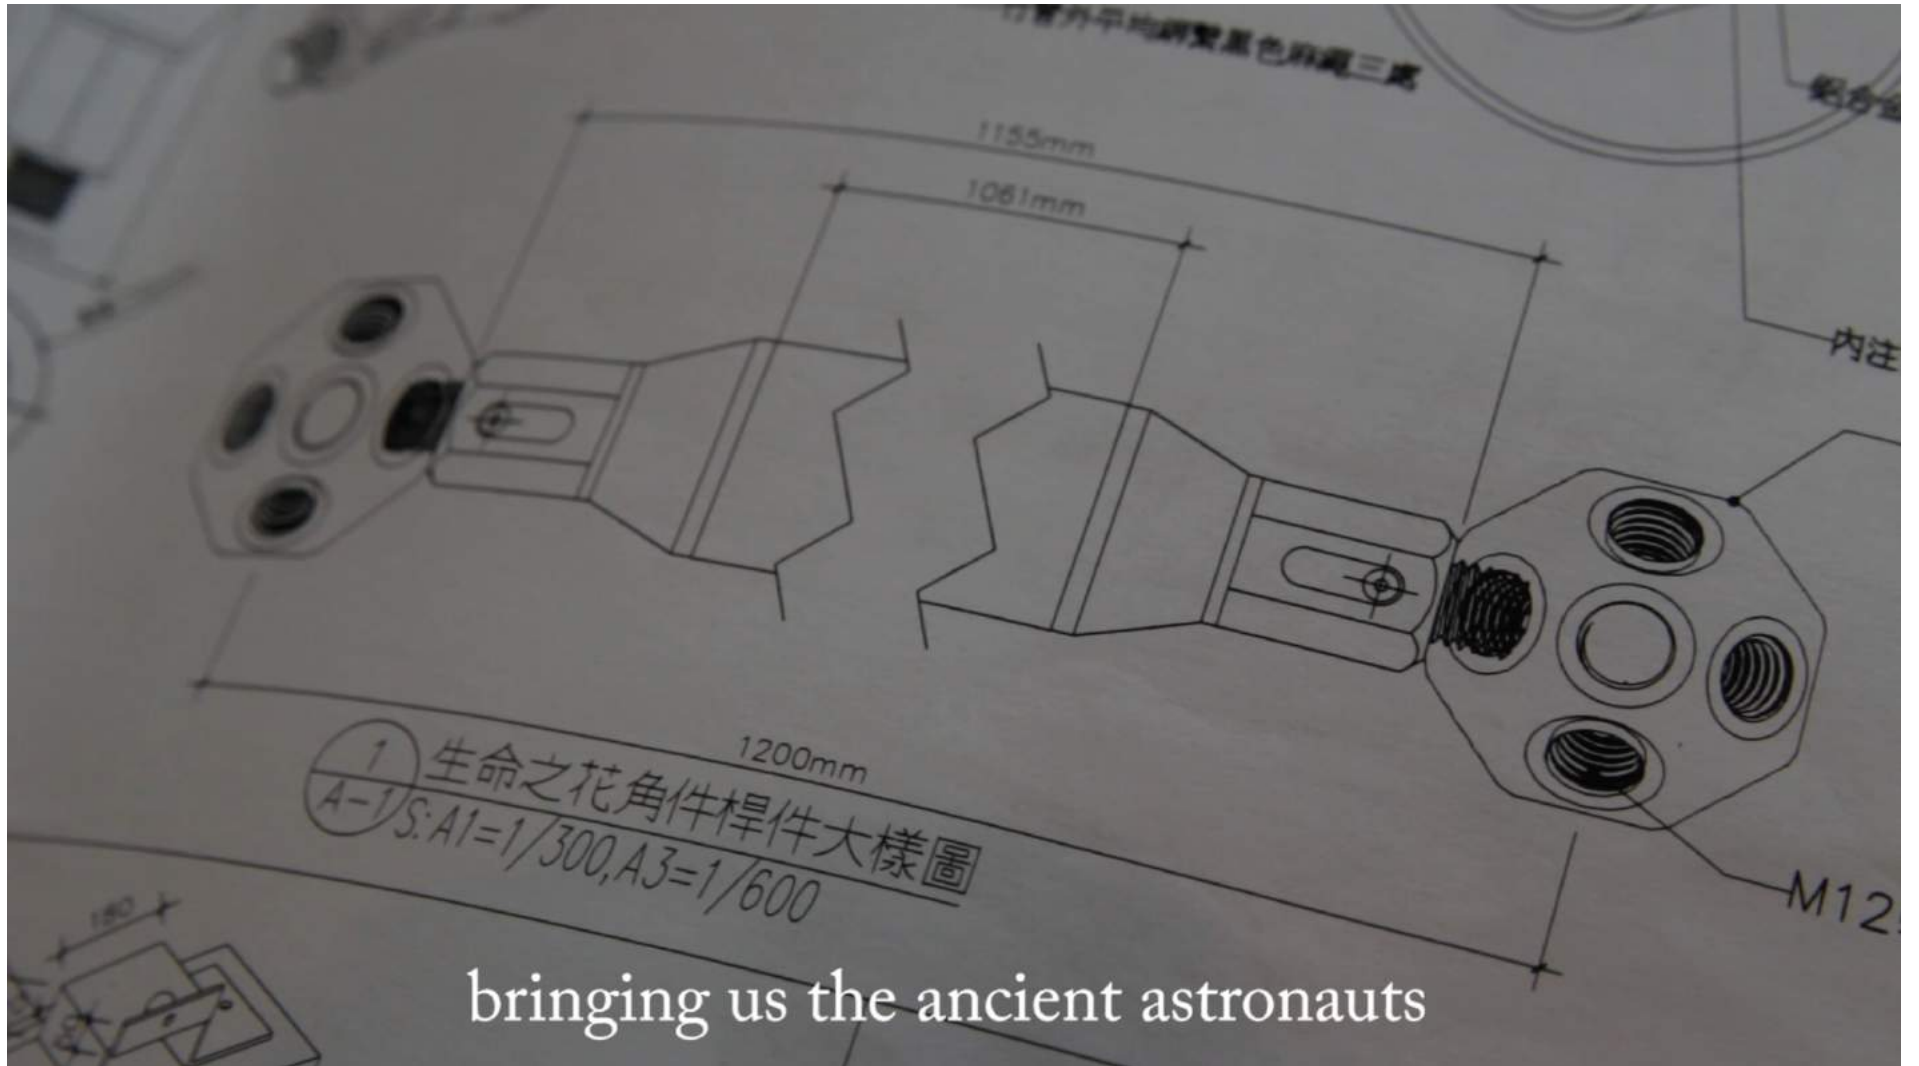

and had heaven in their hands

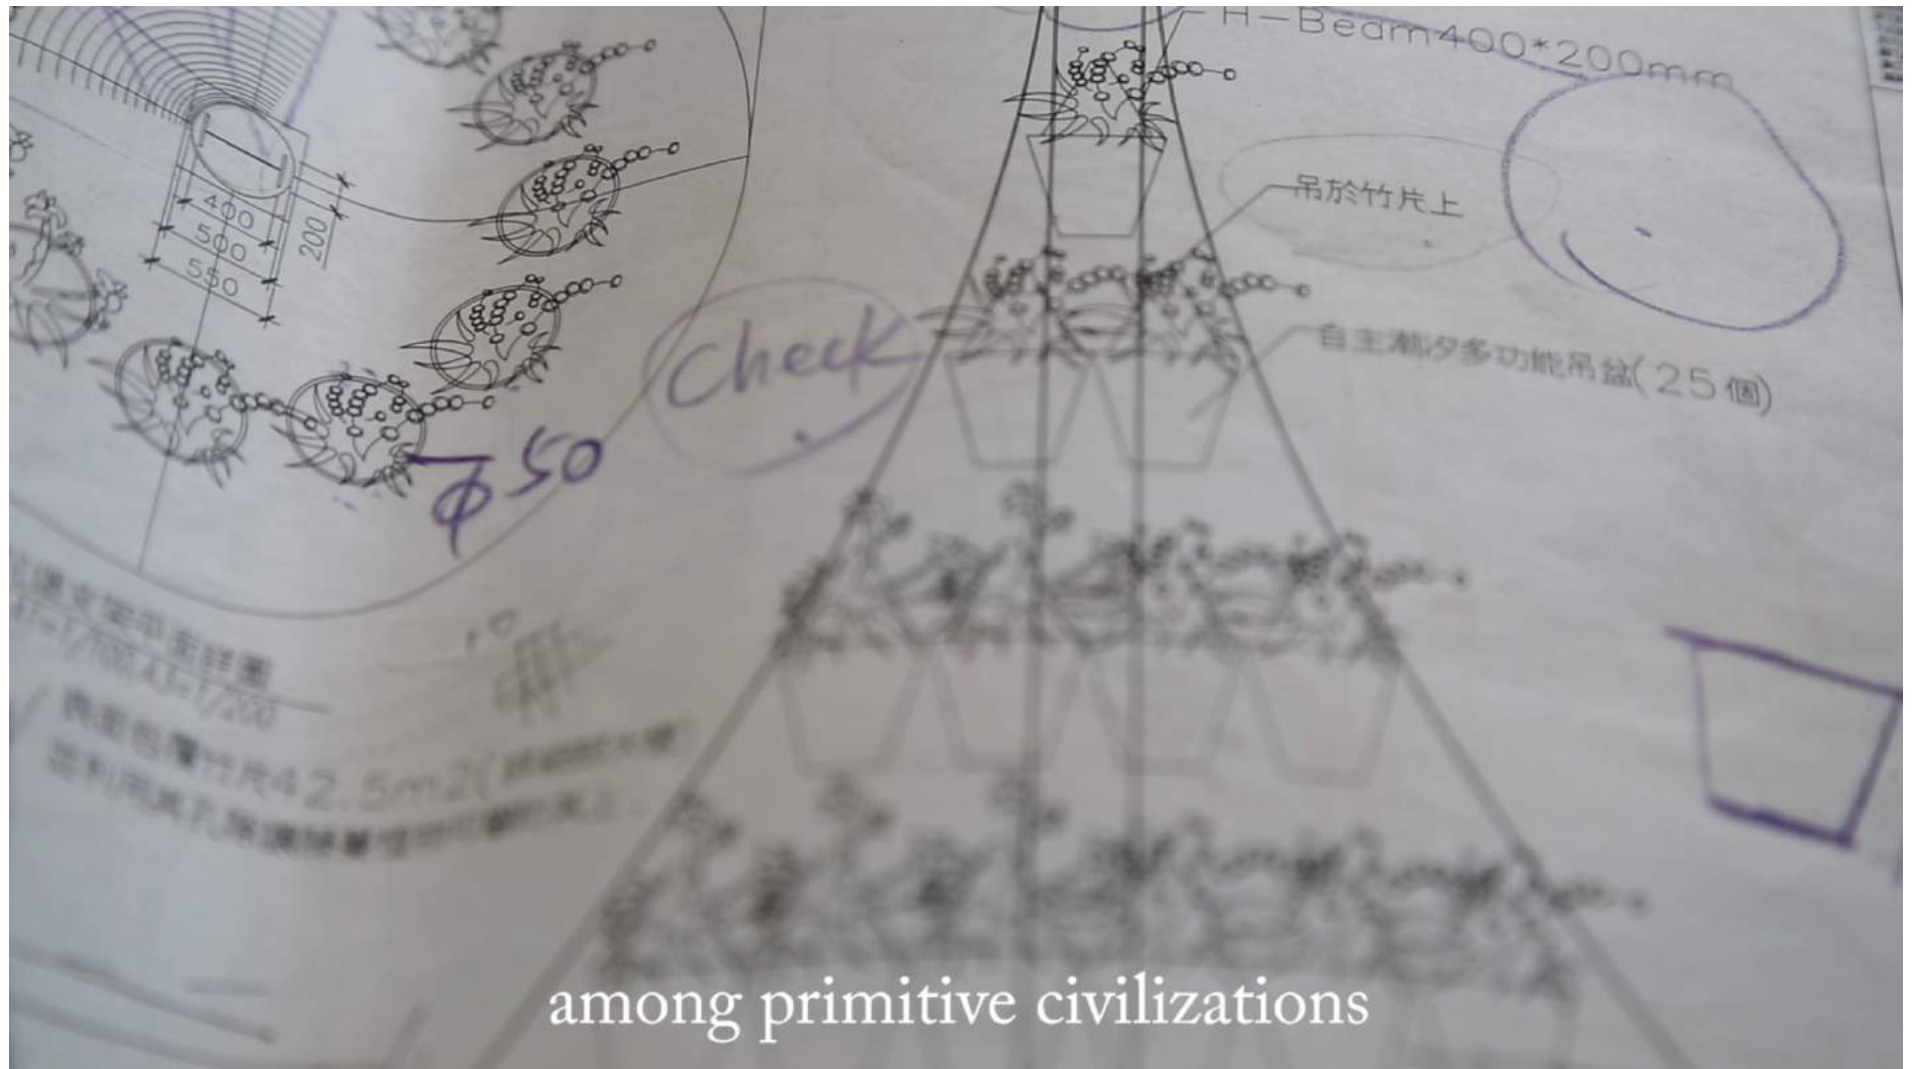

A great interstellar vehicle

piloted by the gods

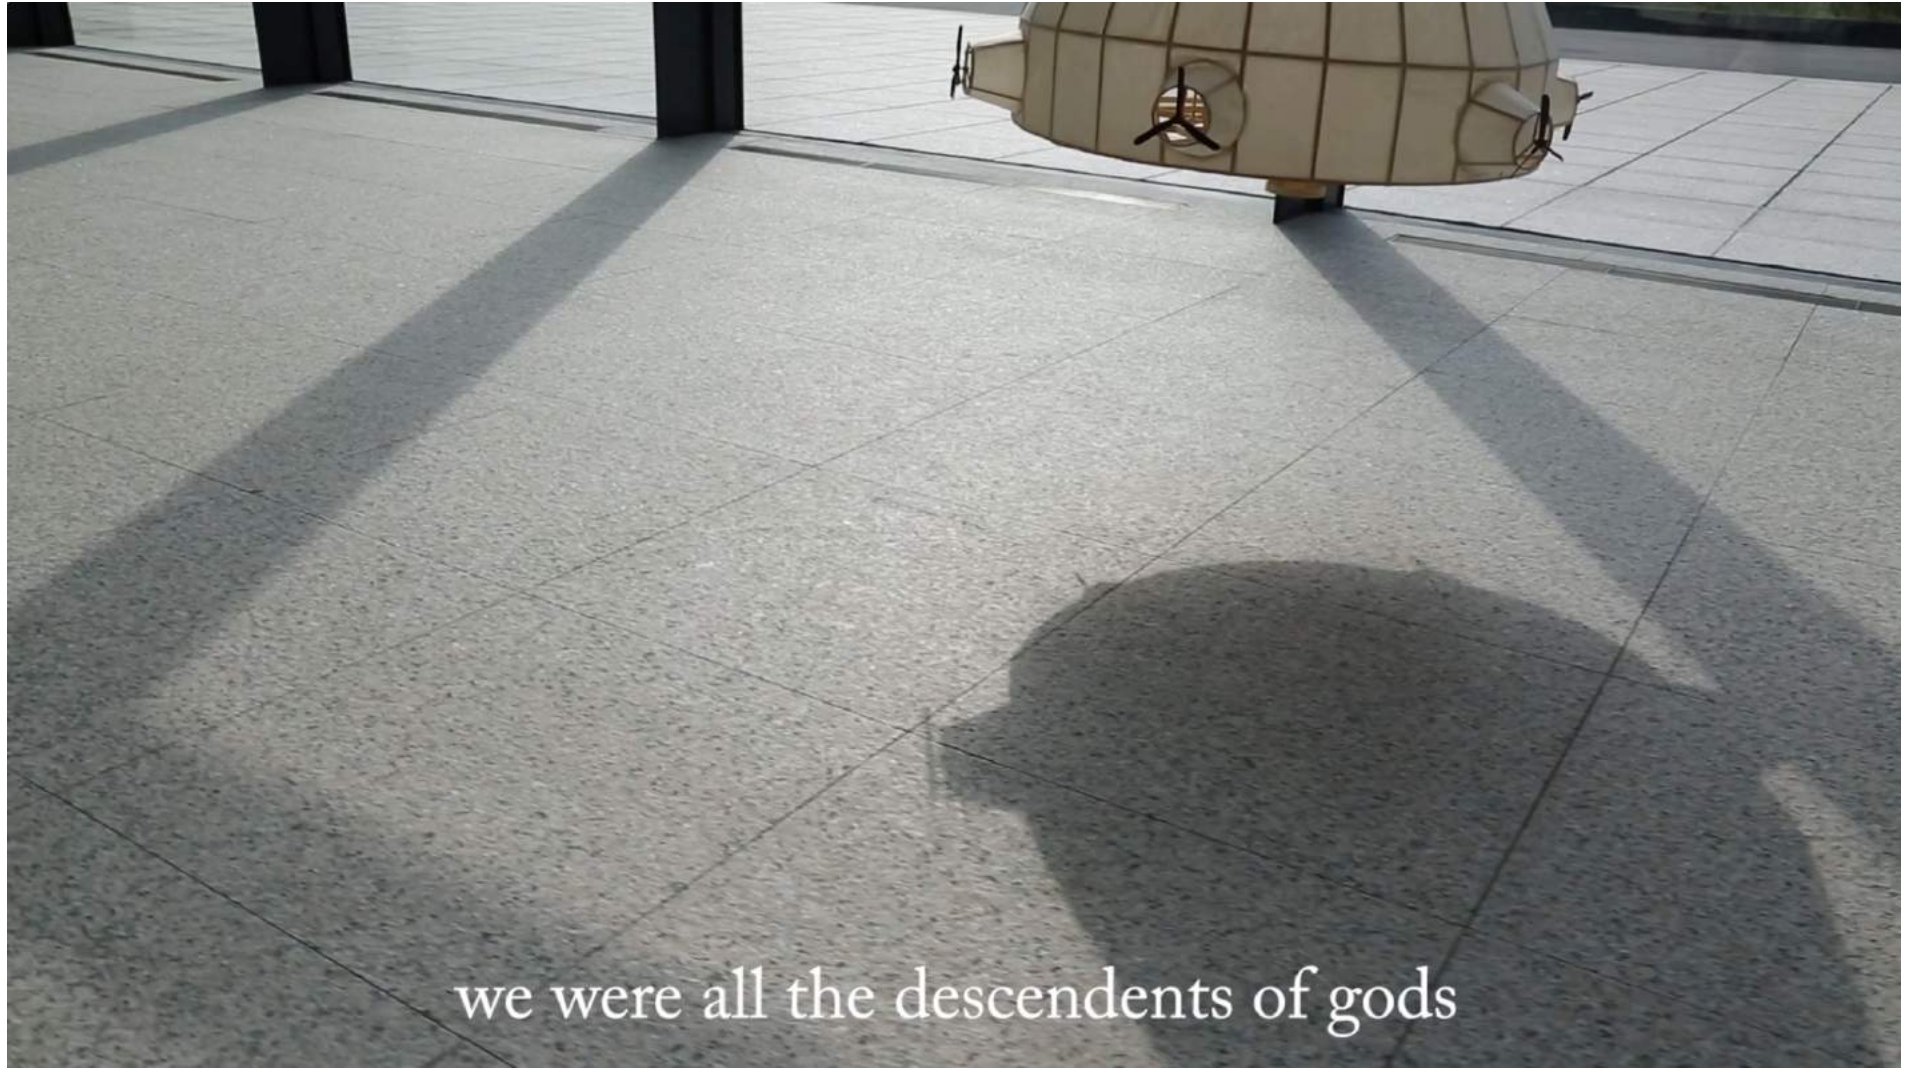

In previous lifetimes

we were all the descendents of gods

and to challenge physical laws-

gravitation, symmetry,

velocity, continuity...

was a matter of practice and faith

Open your own perception

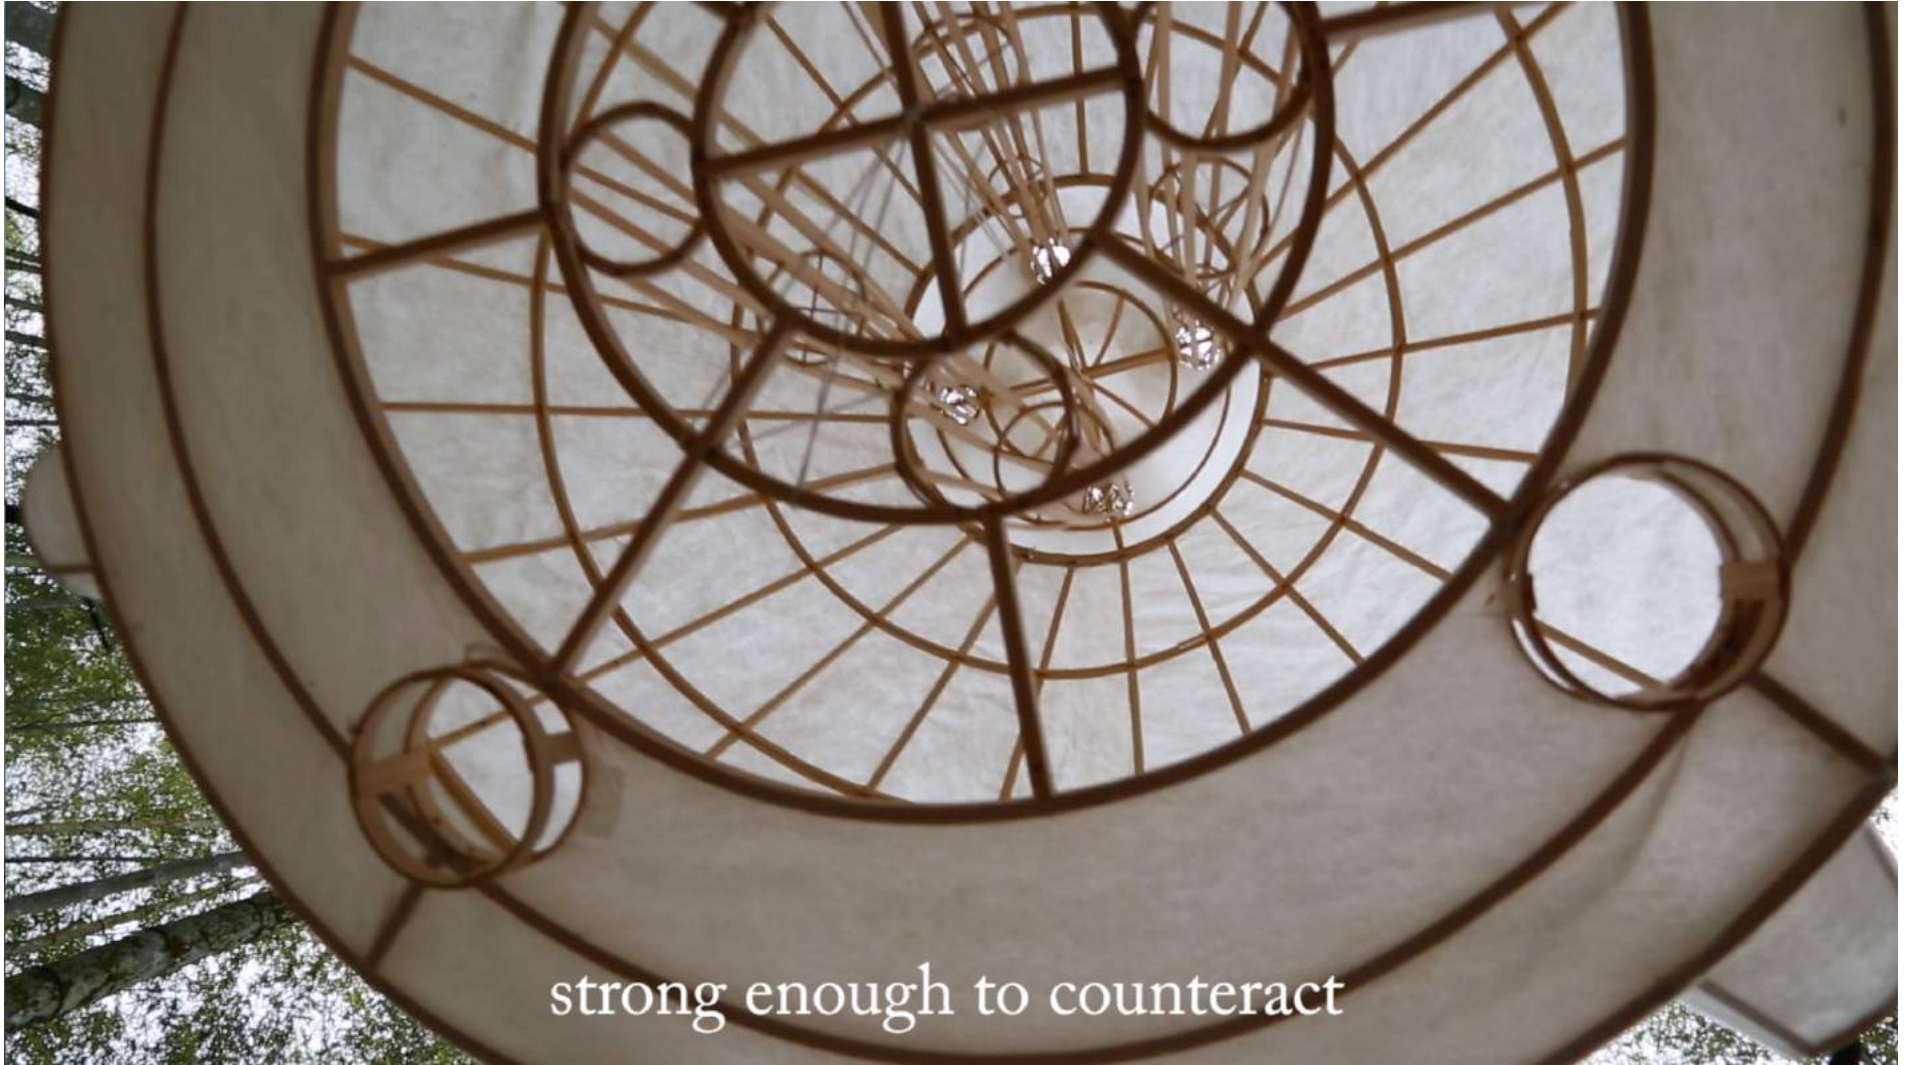

to the technology that leaves you with

the analogous power of the laghima

that centrifugal force

strong enough to counteract

an gravitational pull

levitate

make yourself a propulsion system

The privilege of operating a flying machine is great

knowledge of flight, the most ancient of our inheritances

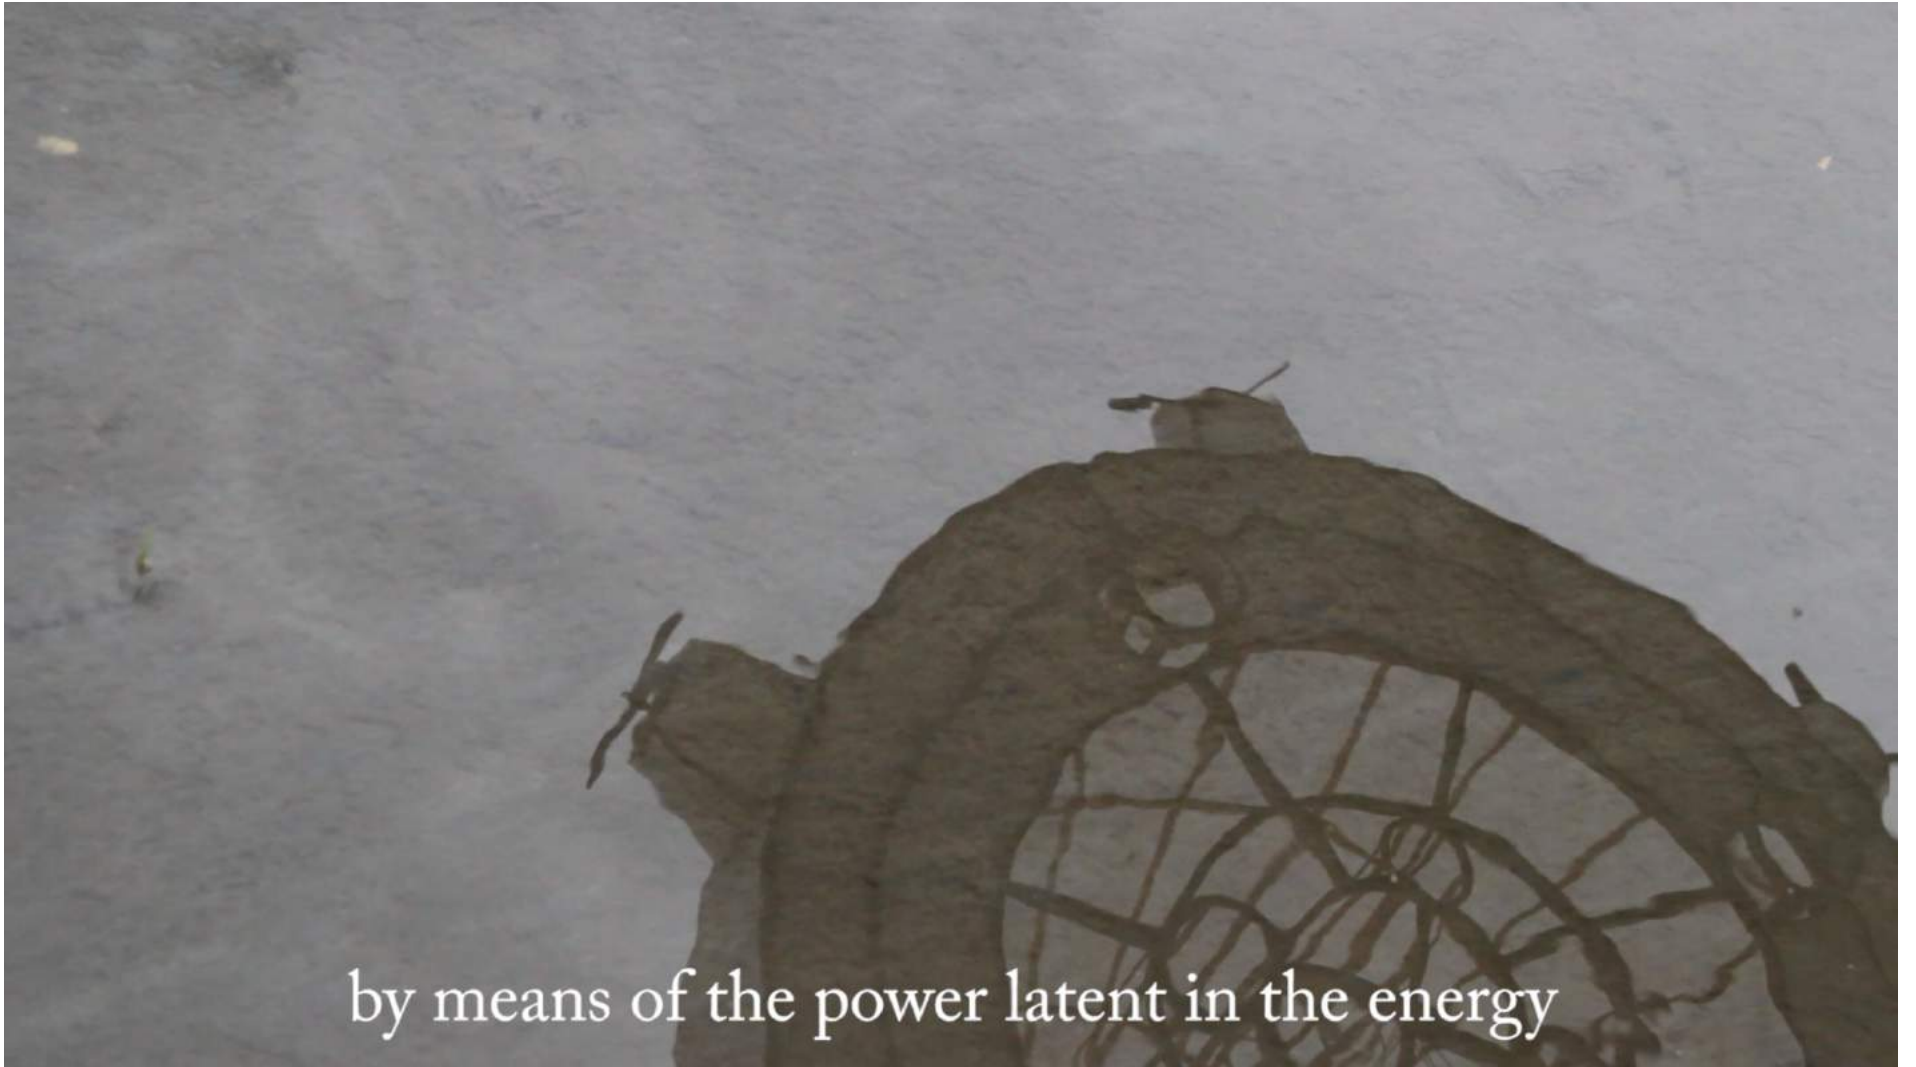

a gift from those on high.

Strong and durable must the body of the Vimana be made

like a great flying bird of light material

by means of the power latent in the energy

vertically ascend,

vertically descend,

move at an angle

forwards and backward

fly in the air,

and heavenly beings can come down to earth

Those who teach will be extraordinarily rare

those who listen will be few as well

patience to the listeners

it is about to happen.
